

# 2015 CELEBRATION OF PUBLICATIONS, CREATIVE WORKS, AND GRANTS

Wednesday, October 28  
University Ballroom  
3:30-5:00 p.m.

Sponsored by  
The Division of Academic Affairs

A university is more than an amalgamation of several colleges. It also is an organization which celebrates the full richness of faculty contributions including those vital and exciting contributions in research, scholarship and creative activity within their disciplines. These contributions come in many forms: journal articles, book chapters, monographs, art works, music compositions, performances of many varieties and a host of others. Funded research contributions are similarly varied. Through such activities, faculty members stay at the growing edges of their fields, and in so doing, they enrich their intellectual lives as well as those of their students.

Once again, I invite each participant at this event today to browse the contributions of your colleagues, ask questions, and celebrate the intellectual vitality of our university community. Each year as this event grows and widens its reach and audience, it continues to inspire and impress me. I am sure it will do the same for you.

## 2015 Recipients of the Edwin L. "Bud" May Award

**Sean and Rebecca Peebles**

**Dr. Rebecca Peebles** has been a tenure-track faculty member in the EIU Chemistry department since 2004, serving as Annually Contracted Faculty for three years before that. Prior to coming to EIU, she was a Visiting Assistant Professor at Canisius College in Buffalo, NY for one year. In 2008, she and Sean Peebles received National Science Foundation funding for Research at Undergraduate Institutions to perform microwave spectroscopy to determine the structures of small molecules, and particularly to understand the properties of weak interactions between molecules, which are important in a range of applications such as the action of drugs in the body, biochemical reactions, and construction of nano-machines. This funding was renewed in 2012, and current interests also include formation and spectroscopic investigation of unstable chemicals containing electrical charges. Since 2008, the Peebles's joint funding has supported 19 summer research students, often for multiple years, as well as many additional school-year only students. Dr. Peebles has previously received grants from the Dreyfus Foundation and the Petroleum Research Fund to support spectroscopic studies of atmospheric pollutants such as ozone destroyers, and since 2009 she has taken multiple trips to the Canadian Light Source synchrotron facility in Saskatchewan to record high precision spectra of potential groundwater contaminants. Dr. Peebles has received support for these endeavors from the Council on Faculty Research, which, combined with Chemistry department support, has allowed her to take students along on these data collection missions. Dr. Peebles is a native of Washington, DC. She received a BA in Chemistry from Oberlin College in 1996 and a Ph.D. in Physical Chemistry from the University of Michigan in 2000.

**Dr. Sean Peebles** has been a faculty member in the EIU Chemistry Department since 2001. His research focuses on determination of structure and properties of molecules and weakly interacting clusters of molecules using microwave spectroscopy and computational chemistry. Recent National Science Foundation (NSF) funding allowed modifications to also target studies of reactive ionic species in the gas phase. The research utilizes a chirped-pulse Fourier-transform microwave spectrometer, which was constructed entirely at EIU with the help of undergraduate students and represented the first such instrument at a principally undergraduate institution. Our goal is to improve understanding of the fundamental forces acting between molecules, such interactions being important in many different areas, such as drug interactions, protein folding, CO<sub>2</sub> capture, and atmospheric and combustion chemistry. In addition to NSF support, Dr. Peebles's research has also been funded by external grants from the Petroleum Research Fund, and he was the recipient of a Dreyfus Foundation Teacher-Scholar Award in 2009. Dr. Peebles received his B.Sc. and Ph.D. degrees in Chemistry from the University of Exeter in the UK, and was a postdoctoral research fellow at the University of Michigan, Ann Arbor and a Visiting Assistant Professor at SUNY Fredonia before coming to EIU.

### 2015 Dean's Award of Excellence in Summer Research and Creative Activity

#### Dr. Lyndsay Jenkins, Psychology Department

Dr. Jenkins's research interests revolve around student academic success, factors that enable success, such as academic enablers and social support, as well as potential barriers to academic success, such as externalizing behaviors, bullying, and peer victimization. Through her research, she hopes to gain a better understanding of characteristics and outcomes associated with major bullying roles (i.e., bully, assistant, victim, defender, and outsider) and how this process can be translated into prevention and intervention efforts for schools.

She graduated from Northern Illinois University with a Ph.D. in Psychology, specializing in School Psychology. Dr. Jenkins has been at EIU since 2012 and teaches undergraduate and graduate classes in the Psychology Department. She is the coordinator for the Undergraduate Internship Program in the Psychology department and co-advisor for the Psychology Club. She regularly works with undergraduate and graduate students and their research projects and has sponsored over two dozen student research presentations at local, regional, and national conferences in the last three years.

## 2015 Dean's Award of Excellence in Research and Creative Activity

### Dr. Michael Menze, Biological Sciences

Dr. Menze's research focuses on the biochemical underpinnings of adaptations to extreme environmental insults such as elevated temperature, severe dehydration, and freezing in animals. He is especially interested in how the 'cellular powerhouse', termed mitochondrion, integrates into states of suboptimal metabolic activities. His interest in mitochondrial physiology and metabolism aligned well with the research objectives of two colleagues here at Eastern, and he quickly developed strong collaborations with Dr. Britto Nathan a Neurobiologist in the Biology department, and Dr. Konkle a Biochemist in the Chemistry department. The synergistic interactions among these three scientists lead to novel research avenues investigating the role of a recently discovered iron-sulfur cluster containing protein termed mitoNEET (CISD1) in mitochondrial energy production and neuronal health. All three scientists are continuing to actively collaborate on several questions surrounding the role of mitoNEET in a variety of biological model systems and diseases. Dr. Menze also fosters a strong student centered research program at EIU and he provides many undergraduate and graduate students with research opportunities throughout the year.
